

# CASE HISTORY

*SAFEBASE™ 2.875" STANDARD DUTY HELICAL PIERS*

## POOL SUPPORT AND MORE, LAKEVILLE INDIANA

After the installation of 131 SafeBase Helical Piers for the support of the home being built in Lakeville, Indiana, A&M was requested to install additional piers for other structures on the property. An indoor swimming pool was to be constructed supported on a grid of grade beams supported by 20 SafeBase Helical Piers. Above is a photo of the helical piers prior to cutting them at their required elevations. It was also decided to support the garage floor on a series of reinforced concrete grade beams supported by 24 SafeBase Helical Piers. A walk in freezer was to be built as an addition to the home and prior to pouring footings an additional 5 Safe Base Helical Piers were installed.
