

SAFE*BASE*™ Helical Piers

SAFE*BASEMENTS*™

Signs of a settling **Foundation!**

- Uneven floors
- Cracks in the foundation
- Gaps around windows
- Cracked drywall
- Doors and windows are hard to open and close
- Leaning chimney

The SafeBase™ Helical Piering System was designed for both residential and commercial applications. Whether you are repairing a settling basement, adding or repairing a deck, need deep foundations for new construction or underpinning commercial and residential buildings, SafeBasements™ has a system suited for each application.

SAFE BASE™ Helical Piers

Advantages

1. Installs in different weather conditions.
2. Minimal equipment needed.
3. No waiting, concrete can be poured immediately following the installation.
4. Install even in tight areas.
5. Versatility - from decks to commercial high rises.
6. Installs quickly without costly excavation.
7. Ideal for tension and compression situations.
8. Environmentally friendly.

The cost-effective solution to your settling problem is to install SafeBase™ Helical Piers.

Each pier is advanced into the ground until it reaches stable, suitable soil. A bracket on the top of each pier is attached to the foundation which can then be raised or stabilized depending on the situation.
