

# THE WORLD'S MOST ADVANCED PIER BRACKET

## SaberTooth™ Push Pier Brackets

- ▶ **Options** - Bolt and nut accessories are used to secure replacement concrete due to damaged footings or as an adjustment to seating.
- ▶ **Massive Capacity** - Up to 100 kip capacity depending on the pier used. Our strongest brackets ever!
- ▶ **Grip** - Teeth on the SaberTooth™ brackets hold the Pier in place while driving pier tubes and are perfect for holding box steel tubing when footing reinforcement is needed.
- ▶ **Locking Reinforcing Sleeve** - Locks in place after the first push while holding the bracket steady.
- ▶ **Interlocking Construction** - SaberTooth™ brackets have been engineered with an interlocking design. Allowing for more capacity with less reliance on individual welds.

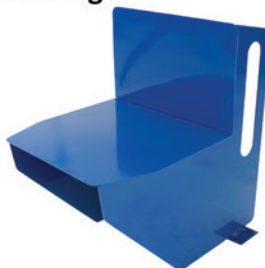

Interlocking bracket design

Bracket jack lifts and holds pier bracket in place for the first push. Easily removed.  
**No More Blocking!**
